COMPANY PROFILE

HUNAN DAYU SHENGONG WATERPROOF TECHNOLOGY CO., LTD. was founded in 1993. Holding the registered trademark DAYU SHENGONG, our production base is located in Ningxiang National Economic-Technological Development Zone. We are a modern high-tech enterprise integrating R&D, manufacturing, sales and construction of waterproofing materials. We focus on research of key technologies for building
waterproof solutions. Driven by continuous innovation, we strive to become a leading supplier in the global building waterproofing industry.
Our company has obtained ISO management system certifications and China Environmental Labeling (Ten-Ring) certification. Many of our products are underwritten by China Life Insurance. We are widely recognized as a reliable brand with stable quality and good integrity.

HOUSEHOLD REPAIR SERIES

Clear Waterproof Sealants
System: Transparent gel & liquid invisible waterproof sealing system
Features: Crystal-clear non-yellowing, UV & mildew resistant, multi-surface adhesion
Application: Roofs, walls, balcony, bathroom, gutters, pipe seams
Usage: Clean substrate, brush 2 coats, fully cure before water exposure

Extreme Wet Patch Roof Sealant Paste
System: Hybrid-polymer wet-surface roof repair paste system
Features: Works on wet surface, instant leak-stop
Application: Asphalt roof, flashing, RV, boats
Usage: Clean surface, apply directly on damp substrate, full cure

Concrete Crack Repair
System: Grey ready-to-use cement-based repair paste system
Features: Shrink-proof, fast-setting, no primer needed
Application: Driveways, foundation, garage floor, wall cracks
Usage: Remove loose debris, trowel paste into cracks, cure fully

Metal Rust-Proof Coatings
System: Metal anti-corrosion primer & topcoat liquid system
Features: Stop rust, UV-weather resistant
Application: Metal roof, gutter, railing, steel structures
Usage: Remove loose rust → primer → topcoat, 2 coats recommended

Nano Double-Sided Tape
System: Transparent removable nano-gel mounting tape system
Features: Strong bond, residue-free removal
Application: Household mounting, DIY decoration
Usage: Clean surface, cut tape, press firmly

CONSTRUCTION-GRADE WATERPROOF PRODUCTS

JS Polymer-Cement Waterproof Coating
System: Two-component organic-inorganic polymer-cement composite system
Features: Water-based eco-friendly, high crack-bridging, usable on damp substrate
Application: Bathroom, kitchen, basement, swimming pool, tunnel, exterior wall
Usage: Solid damp base; mix liquid+powder; 2-3 cross brushing; cure and water-test

K11 Cementitious Waterproof Slurry
System: Two-component modified cement-based crystalline-flexible slurry system
Features: Positive & negative-side waterproofing, breathable, anti-alkali
Application: Bathroom, reservoir, swimming pool, basement, underground parking
Usage: Dust-free damp base; mix evenly; two cross-brushed coats; cure before tiling

Quick-Setting Leak-Stopping Mortar
System: Rapid-hardening hydraulic cement-based leak-plugging repair system
Features: Ultra-fast setting, stop running-water leakage
Application: Emergency leak-plugging, construction joints, pipe penetration seepage
Usage: Chisel wedge groove; mix paste; press into leak point; over-coat with waterproofing

R200 Exposed Roof Waterproof Coating
System: Single-component high-molecular exposed weather-resistant coating system
Features: Direct outdoor exposure, anti-aging, high flexibility
Application: Exposed roof, terrace, roof gutter, outdoor concrete floor
Usage: Repair cracks; reinforce corners & pipe penetrations; 2-3 cross coats

Polyurethane Waterproof Coating
System: Elastomeric liquid-applied polyurethane membrane system
Features: High tensile strength, excellent impermeability, low-temperature elasticity
Application: Basement, roof, underground structures, bridge deck
Usage: Dry clean substrate; mix as required; multiple thin coats; add protective layer

Shuibizhi Elastic Rubber Waterproof Coating
System: Single-component rubber-modified liquid-rubber waterproof coating system
Features: Super-high elasticity, cold application, UV resistant
Application: Exposed roof, metal roof, gutter, old building renovation
Usage: Repair defects, reinforce details; apply 2-3 thin cross coats

Waterproof Membrane
System: Polymer-modified bitumen / self-adhesive sheet membrane system
Features: High tensile & elongation; self-adhesive / torch-applied options
Application: Large-area roof, basement foundation, tunnel, subway
Usage: Clean base; reinforce corners; control lap width; install protective layer
